

**AP Physics 1 Student Summer Assignment:**

We will start the year studying motion. Please keep track of the locations where you travel to this summer and the time that it took you to arrive (time of travel). The mode of transportation does not matter, only the distance and the time of travel. Please make a data table that shows Original Location, Destination, Time of travel (elapsed time) and distance traveled. A minimum of 20 trips worth of data should be collected. Try and use different modes of transportation if you have the opportunity: pedestrian, car, train, plane or boat.
